## Industrial look is all the fashion!

Local business **air cool engineering** (NI) Ltd, has recently completed a major air conditioning, heating and ventilation system with one of Britain's fastest growing fashion labels.

CULT, an established and iconic brand from UK retailer SuperGroup, has opened its first flagship store in Dublin. To reinforce the street wear and vintage clothing designs merchandised in store, the air conditioning brief required the ducting and grilles to be 'exposed' throughout the store.

**air cool engineering**, based in Limavady, installed four Daikin Twin Split Systems CMSQ Condenser Units and one RZQ single split unit. Both systems provide heating and cooling for the two sales floors. An electric over-door heater/air curtain also helped reduce heat loss from the building's main entrance.

The outdoor condensers were all mounted on an exterior platform to the rear of the building. The basement stockroom had two ceiling mounted heaters – providing heat to this area as and when required. Air extraction systems were also installed in the store's two staff toilets.

Andrew Grant from **air cool engineering** said: 'High Street retailers are keen to continue their design themes throughout their stores. The industrial styled air conditioning system reinforces the Surperdry and CULT brands and represents the American vintage character of the clothes. As an established business with over 12years of expertise, **air cool engineering** has secured on-going contracts with numerous national retailers – delivering installations and carrying out maintenance contracts throughout the UK and Ireland.'
