### Auction House Gets Exposed

**air cool engineering** has completed the commissioning of a major air conditioning, heating and ventilation system at N. Ireland's latest purpose-built auction house in Dromore, Co.Tyrone.

Working in partnership with Patrick McCaul, Consultant Engineers and Mr. Derek Keys, Euro Auctions owner, **air cool engineering** has had the exciting opportunity to carry out a major installation within the Euro Auction building. Mr. Key's vision for his purpose built premises, was to ultimately reflect the practical aspects of the business' activities. **air cool engineering** installed exposed services, which would normally have been concealed. Ductwork, cable trays and air conditioning units all play a role in the overall finished industrial aesthetics of the offices.

The impressive 'futuristic' building has two Mitsubishi Electric R2 City Multi Systems servicing all the offices. These are supported by Mitsubishi Electric 'Lossnay' Heat Recovery Ventilation Systems. These work together to create a healthy, comfortable and controlled environment for 'bidders' and staff alike.

Martin Mullan, from **air cool engineering** said: 'The Euro Auction is comprised of many rooms of varying size – all with different heating, cooling and ventilation requirements. Our use of different Mitsubishi Electric technologies and bespoke control systems, has resulted in the client having a state-of-the-art system which maintains optimum temperatures, whatever the season.'
